Proof of concepts are the most effective way to provide your customer with an estimated number of shifts that each wearable might last.

Predicting Wearables lifetimes

One of the common questions that you will often come across is, "How long do the wearables last?"

The number of shifts a wearable lasts is different for every customer and can even vary within the customer site based on the specific use cases.

It is dependent on factors like:

1. Number of scans / shift:
 - higher scan volumes might require more frequent replacement
2. Type of material being handled:
 - sharp edges or intense assembly will wear quicker
 - soft packages or basic handling will last longer
3. Sharing of wearables
 - providing each worker with their own wearable can significantly extend the lifetime
